- Ontology Building Methodology

Project Goals

Identify the network of relationships among jazz artists described in interview transcripts

From The Nathaniel C. Standifer Video Archive of Oral History: Black American Musicians Located in the African American Music Collection at the University of Michigan

<http://www.umich.edu/~afroammu/standifer/rivers.html>

Sam Rivers

D = Darryl Duncan R = Sam Rivers

D Good afternoon, here we are. This is an interview for the Afro-American music collection. My name is Darryl Duncan and I'm interviewing Mr. Sam Rivers. Today is March 26, 1988.

Mr. Sam Rivers, you have been a saxophonist of note and it's really a pleasure for me to be here talking with you. R Thank you very much. It's a pleasure to be here.

D Especially from my musical perspective. First, could you tell us something about your musical training and how you got started as a saxophonist? R I got started as a saxophonist rather late, but the musical training goes back to practically birth. My father and mother are both musicians. My grandfather and his two sisters were musicians. Just about all relatives play some sort of musical instrument.

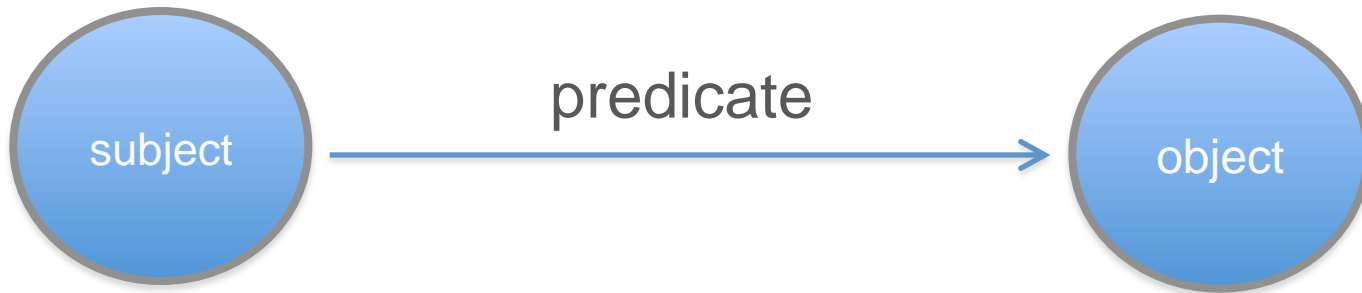

D You come from a musical family- R Yes, I would say. My mother is a music teacher and I got started studying the piano around four or five something like that in Chicago. I was born in Alvino, Oklahoma. My father and mother were traveling - we were on tour with the Silver Tone Quartet. My father was the first tenor and my mother was the accompanist; so I was born on the road and they were out of Chicago so Alvino, Oklahoma which it say on the birth certificate was a stop on a tour. So, we lived in Chicago. My mother took a job in Shorter College in north Little Rock when I was seven to maybe ten so I came up on the campus and went to Catholic school in Little Rock.

D I've always read on liner notes and things like that that Sam Rivers is from Boston. When did you end up in Boston and what would you say about Boston that could be called a brand of your musical identity? R Boston kind of sound? R Boston was after I had completed the military service. I was in the Navy for WWII and after that I went to Boston to study at the Conservatory. At the time I think it was a fortunate choice - I had a choice between New York or Boston and I chose Boston to further my musical growth, but I was already a musician before I went into the Navy. I wasn't in the band and there were some other trades I liked. I liked navigating and I also went to a motion picture editing school and edited films for the Navy. The musical career was already in progress so I decided to go to Boston to study more. Fortunately at that time there were quite a few musicians that went on to greater things that we were all there together. Jackie Byard, Gi Gi Grice, Quincy Jones, Alan Dawson, Nat Pierce, Charlie Mariano, and many more that I'm sure I'm missing. Frank Kidd, an alto player that was very advanced for his time. I remember his sounding like Eric Dolphy in the late forties. Everyone was laughing, of course, and scratching their chins. I remember these kinds of situations. There were always these kinds of musicians around that went past the accepted bounds. When they did, they weren't accepted as all there or a bit eccentric but never really taken seriously until the late fifties like Arnette Coleman.

D So would you say that these types of influences early in your career can be accounted for as the heavy influence on your progressive style - your forward looking style? R I think all the influences combined - we're all sponges you know if we're open enough, people that are not open get it anyway, we don't remember where we got it from but we

Knowledge Representation Languages

- RDF Schema (RDFS)
- Web Ontology Language (OWL)
- Simple Knowledge Organization System (SKOS)

Knowledge Representation Languages

RDF Schema (RDFS)

- Defines classes and properties
- Organizes them hierarchically

Knowledge Representation Languages

Web Ontology Language (OWL)

- Built on RDF and RDFS, but capable of representing complex relationships
- Logical combination of classes—intersections, unions, and complements
- Axioms on properties—transitive, symmetric, functional, inverse

Knowledge Representation Languages

Simple Knowledge Organization System (SKOS)

- OWL ontology
- Describes name authorities with *skos:prefLabel* and *skos:altLabel*
- Supports data mapping with *skos:exactMatch*, *skos:closeMatch*

Methodology

Six phases

- Specification
- Modeling
- Generation
- Linking
- Publication
- Exploitation

(Vila-Suero et al., 2014; Heath and Bizer, 2011; Villazón-Terrazas et al., 2011)

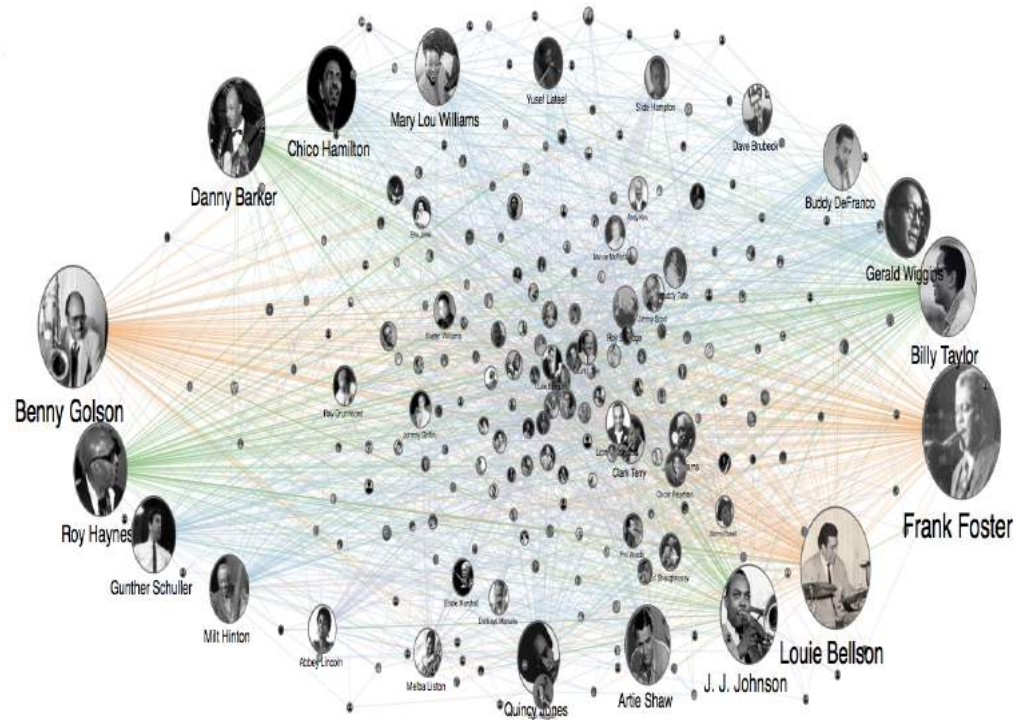

Purpose

- A model to describe the datasets created within the project

Scope

- Domain of jazz music
- Originally limited to jazz artists and social relationships
- Now includes music-related data (performances, discographies, etc.)

Darryl Duncan
(Interviewer)

So would you say that these types of influences early in your career can be accounted for as the heavy influence on your progressive style - your forward looking style?

I think all the influences combined - we're all sponges you know if we're open enough, people that are not open get it anyway, we don't remember where we got it from but we think it's original-so I'm pretty cautious about saying this or that about my originality because things come to me - I don't know where they come from - If I came out with it, it could very well be someone else's, so I'm careful about things about originality because there are so many facts and phrases and ideas bombarding us at all times. Whether we're receptive or not, it doesn't really matter - it comes in anyway. Some of it pierces the armor, so to speak. But, my influences were of course Charlie Parker and Lester Young before that and Coleman Hawkins. Coleman Hawkins, Lester Young, Charlie Parker, **Dizzy Gillespie** and Miles Davis really influenced me at that time.
